

GROUNDWATER POLLUTION

Groundwater Contamination Sources:

storage tanks

septic systems

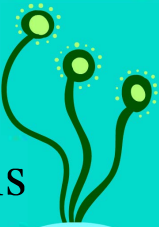

hazardous waste

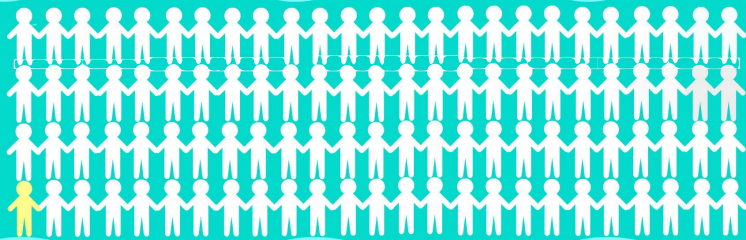

landfills

mining

commercial chemicals

more than half of the US population depends on groundwater for drinking

groundwater supplies drinking water for 99% of the rural population

China has 5 groundwater grades:

1 2 3 4 5
best worst

-73% of deep groundwater in the North China Plain is Grade 4 or 5, both unfit for drinking

fish cannot survive in 75% of China's major rivers
